The most common problems affecting these engines are premature valve stem seal (nitrile rubber) failure, carbon buildup on the intake valves, and collapse of the oil control ring on the piston. Any of these conditions can lead to rough idling, stalling, and fouled spark plugs, and therefore need to be differentially diagnosed.

Electrical Problems

Fuses - Not all cars have a fuse that is connected to the starting system, but a simple check of the fuses can rule this cause out quickly.

Battery - If the connections on your battery become corroded, there is no longer a connection to the rest of the car. This can keep you from starting.
