5. Complete the following, solving for the present value, PV: Case Future value Interest rate Number of periods Present value A \$10,000 5% 5 \$7,835.26 B \$563,000 4% 20 \$256,945.85 C \$5,000 5.5% 3 \$4,258.07 6. Suppose you want to have \$0.5 million saved by the time you reach age 30 and suppose that you are 20 years old today.

Solutions to Time Value of Money Practice Problems

In a nutshell, time value calculations allow people to establish the future value of a given amount of money, at present. The present value (PV) is the money you have today. The future value (FV) is the accumulated amount of money you get after investing the original sum at a certain interest rate and for a given time period, say, 2 years.
