CRDI stands for Common Rail Direct Injection. Direct injection of the fuel into the cylinders of an engine via a single, common line, called the common rail which is connected to all the fuel injectors. Instead of providing separate piston pumps for fuel supply, the common rail alone supplies high pressure fuel to each cylinder.

CRDi stands for Common Rail Direct Injection meaning, direct injection of the fuel into the cylinders of a diesel engine via a single, common line, called the common rail which is connected to all the fuel injectors. Whereas ordinary diesel direct fuel-injection systems have to build up pressure anew for each and every injection cycle, the new common rail (line) engines maintain constant pressure regardless of the injection sequence.

Common Rail Direct Injection (CRDi): Most modern engine's fuel systems use an advanced technology known as CRDi or Common Rail Direct Injection. Both petrol and diesel engines use a common 'fuel-rail' which supplies the fuel to injectors. However, in diesel engines, manufacturers refer to this technology as CRDi whereas Petrol engines term it as Gasoline Direct Injection (GDI) or Fuel Stratified Injection (FSI).

Common Rail Direct Injection - What is CRDi Technology ...

CRDi is common rail direct injection. It is an advanced ECU controlled technology used in modern BS IV vehicles and is only used in CI engines. In CRDi engine a common rail is used where individual injectors are used for each cylinder. In common rail a rail pressure sensor and a pressure regulator is attached which controls the fuel flow.

PowerPoint Presentation: HOW DOES C.R.D.I WORKS? The CRDi engine is designed with a common rail for supplying equal amount of fuel to all cylinders at a desired pressure using a pressure regulator attached to it. The pressure regulator, controls the pressure of the air supplied into the cylinders through the inlet valve.
