The "D15B" I am referring to comes from the OBD2 (1996-1999), EK3, Civic VTi / Civic Ferio Vi. With the exception of the dual VTEC solenoids, it's very similar to the D16Y5, or the D16Y8 but with EGR. This motor alters both the intake valve size (by keeping one valve mostly closed under certain conditions) and intake valve lift, duration, and timing.

These are taller than the B20 injectors. To make them fit I put one B18A (d16a6 ones will work too) fuel rail spacer under each of the 3 fuel rail studs on the B20 mani (between the stud and the IM, they do not fit between the rail and the stud). I had to put a drill through the all of the spacer's holes so they would fit over the stud's threads.
