An ecological niche describes how a species interacts with, and

Download Ebook Ecological Niche Biozone Answers

lives in, its habitat. Ecological niches have specific characteristics, such as availability of nutrients, temperature, terrain, sunlight and predators, which dictate how, and how well, a species survives and reproduces. A species carves out a niche for itself in a habitat by being able to adapt and diverge from other species.

Ecological Niche - Definition, Examples and Quiz | Biology

...

a) the realized niche can be regarded as flexible because species are forced to occupy a niche that is narrower than their full range of environmental conditions and one to which they are best adapted. Adaptations change over time, making the niche dynamic or flexible.
