The ECU is the very heart of your engine management system. Almost everything under the bonnet, and a lot of the stuff inside the car, connects to it in some way. When things start going wrong, it's essential to check that signals are getting to or coming from the ECU, and that means testing the wiring.

The conversion harness asks to tap into a few wires on the ecu. The instructions Ktuned keeps giving me are for that of an rsx type s pinout as they don't have the pinouts for element either. So for example if it calls to tap into pin a16 for the fuel pump relay. That would be the pin for an rsx harness, not an element.
