Lecture 11: February 25 11-5 Now with our choice of $\alpha = 2 + 1 \cdot 2 \log n (2/)$ $\geq 1 + 2 \delta + 1 \delta \log n (2/)$, this yields $P[\text{some cut of size } \geq \alpha c \text{ fails}] \leq n - (2 + \delta) = pc$. This concludes the argument for item 2 and the analysis of the algorithm claimed in Theorem 11.2.

EECS 2331 is our "overflow" room. It is normally a CAEN lab. If the main lab room (2332) is full, you'll need to go to the overflow room. Once you have a lab station, you need to wipe down the station (FPGA board, the keyboard, the table immediately in front of you). When you leave the lab and are done using the station, you need to wipe it ...

EE 271 : EE - UW
Solution:A function $x(t)$ has an even-symmetrical waveform if $x(t) = x(-t)$. It is symmetric about the vertical axis. A function $x(t)$ has an odd-symmetrical waveform if $x(t) = -x(-t)$. Reflecting an odd-symmetric function about the vertical axis, then about the horizontal axis (or vice-versa), leaves it unaltered.

Signals and Systems: Theory and Applications
271, 273, or 277 Soda. Those machines are connected directly to Solaris SPARC servers, and so should give good respon-siveness and performance. Wireshark uses a graphical interface, so we don't recommend that you try to use Wireshark by log-
