the distributor drive  
rod performs a very  
important function.

This Ford 172 distributor drive shaft is a hex sided shaft made of hardened steel, 3.93" long with chamfered ends. This drive rod connects the distributor with the oil pump. The Ford 172 or 192 engine's cam gear drives the distributor which then through this short shaft drives the oil pump.

06:03:09 I suspect you have a 192 cubic in industrial engine. But the only difference between a 172 and a 192 is the bore and possibly casting (D3JL = 192, D2JL = 172 per a rebuilders parts list) both are 1970's vintage.

Find the engine, casting, or part number. Ford places the part number in various locations, depending on the engine. Common locations include the rear of the engine, near the starter mount and bellhousing, on the front of the block's right side (when looking at it from the front), on the left side of in-line-cylinder engines, or by the oil
