A couple final shots of the basic stand. I would easily rate this stand at a 3,000 lb capacity. Should hold the engine without being bouncy or springy from the weight: I built a set of grips to hold the block to the stand from the flywheel end like most stands do. Also from the front of the block, and from the valley pan rails.

The fix involves pulling the engine back out and repairing the damage. It would have been nice if we had a test stand where we could run the engine first and uncover the fault where it would be easy to repair. Maybe the guys at Summit Racing have been there too because they just released a simple, self-contained engine test stand on wheels.
