They dwell on building compilers and give the impression that language development requires a lot of theoretical computer science. Terence Parr shatters that impression in his new book, Language Implementation Patterns: Create Your Own Domain-Specific and General Programming Languages (Pragmatic Bookshelf, \$34.95). Using detailed descriptions of 31 language patterns—common data structures, algorithms, or strategies—Parr demystifies the universal elements of languages.

Want to create a language? It can take a lot of work to make it presentable, but the results can be amazing. To make your own, decide what sounds you want, create words, and hold it all together with a grammar. (Not necessarily in that order.) Decide the phonology (sounds in the language) What sounds are meaning changing? English: B/P is (bat and pat) and in korean p and ph is (put/phut) while ...
