Mistake Proofing is applied to reduce the scores in Detection and Occurrence.

Once a mistake proofing device or method is proven it is important that the GB/BB follow up with the Quality Department to update the company FMEA if applicable. Severity reduction can also be done as another soft savings benefit from a Six Sigma team.

Mistake Proofing - Six Sigma Material

Document control is critical to mistake proofing because similar to a checklist, it provides a procedure to follow. Often the absence of policy or procedure leads to variation and different customer experiences. For example, in a retail organization, customers were having variable experiences when dealing with the customer service department.

Mistake-Proofing for Operators: The ZQC System / Edition 1 ...

The Zero Quality Control System (ZQC) is a mistake-proofing approach that prevents defects by monitoring processing conditions at the source and correcting errors that cause defects. Since it is human nature to make mistakes, ZQC does not blame people for errors, but instead finds ways to keep errors from becoming defects.
