Opel Zafira Engine Problems

Their main problem is the failure of the Opel Zafira injection pump due to the airing of the system (due to air leakage). An ECU is located on the Opel Zafira injection pump, while the control resistor is cooled using diesel fuel, therefore, due to air leakage, the cooling transistor overheats and burns out, then it requires expensive repairs.

Opel Zafira Engine Problems - atcloud.com

The blower motor resistor is positioned in the flow of air to the cabin because it needs to be cooled. The problem is that in the Zafira B, it's located in front of the cabin filter and very close to it. The blower motor resistor is mounted near the pollen filter. This is where the fire originates.

There are quite a few things that can cause the P0300 trouble code to trigger in the Opel Zafira. Here are the most common problems that will throw the code. They are presented somewhat in order from most to least likely to be causing the code: Low Fuel Pressure- If there isn't enough fuel getting to the engine, this will cause combustion to be less than optimal. Diagnosing low fuel pressure can be tricky.
