Quake Epicenters And Magnitude Student

Students determine the location of the epicenter and the magnitude of different earthquake events using data collected from seismograms. Using measurements they take from the seismograms, a travel-time curve, and a compass, students use a technique called triangulation to locate the epicenter of two earthquakes.

Quake! Epicenters and Magnitude Lab Activity | Sargent Welch

Students learn how engineers characterize earthquakes through seismic data. Then, acting as engineers, they use real-world seismograph data and a tutorial/simulation accessed through the Earthquakes Living Lab to locate earthquake epicenters via triangulation and determine earthquake magnitudes. Student pairs examine seismic waves, S waves and P waves recorded on seismograms, measuring the key S-P interval. Students then determine the maximum S wave amplitudes in order to determine ...

Earthquakes Living Lab: Finding Epicenters & Measuring ...

In this activity, you will determine the location of an earthquake's epicenter and estimate its Richter magnitude. You will be working with seismograms, which are the records of earthquake waves. In order to accurately record earthquake waves at a seismic station at least three seismographs are needed: one each for E-W, N-S, and vertical motion.

Virtual Courseware : Earthquake : Epicenter and Magnitude

Direct students to the Virtual Earthquake Web site, which is a tutorial to guide students through the process of determining earthquake epicenters and magnitudes, as discussed in the previous activity. This tutorial is both a problem-solving activity as well as an active learning activity.

Lesson Plan: Finding an Earthquake's Epicenter | Education ...

Earthquakes Living Lab: Finding Epicenters and Measuring Magnitudes Activity—Worksheet 4 12. What is the “magnitude” of an earthquake? Describe it. The magnitude of an earthquake is an estimate of the total amount of energy released during fault rupture. Since the 1930s, earthquakes have been measured using the Richter magnitude scale, and

Finding Epicenters and Measuring Magnitudes Worksheet

This earthquake lesson plan involves classroom activities that help students identify epicenters and magnitude readings. This lesson plan is useful for elementary, secondary, middle school, and university students. You Don't Need a Seismograph to Study Earthquakes

Most residents of southern Puerto Rico were startled by the sequence of earthquakes that began Dec. 28, 2019 and included a magnitude 6.4 quake on Jan. 7, 2020. Aftershocks are expected to continue for years, including some relatively strong ones, like a May 2 magnitude 5.4 temblor.

USGS Scientists Find Seafloor Faults Near Puerto Rico ...

Two options for plotting earthquake epicenters are provided. In Option 1, a list of recent epicenters is used and students may plot the epicenters on a small map of the world during one or two class periods. The list contains a sufficient number and distribution of earthquakes so that

Thus, stronger rock material, or a larger area, or more movement in an earthquake will all contribute to produce a larger magnitude. Then, Moment Magnitude (M_W) = $2/3 \log_{10} (M_0) - 10.7$. See the Magnitude Types Table (below)for a summary of types, magnitude ranges, distance ranges, equations, and a brief description of each.

Earthquake Magnitude, Energy Release, and Shaking Intensity

Use a dot of about 1mm in diameter for earthquake magnitude 6.0-6.9; a larger dot (about 3mm in diameter for earthquakes of magnitude 7.0-7.9; and a large dot (about 1 cm in diameter) for earthquakes of magnitude 8.0 or greater. As an option, additional information can be portrayed on the map by color coding the depths of each earthquake.

PLOTTING EARTHQUAKE EPICENTERS

Students are given earthquake locations and depths and must determine the appropriate colored symbol (based on the color scale) representing the magnitude or depth and identify the latitude and longitude on the map. Students may need a review of rounding to accurately locate the latitude and longitude points on the map.

Plotting Earthquake Epicenters*

The epicenter of the magnitude 6.6 tectonic quake was located at Cataingan town in Masbate and shook several areas in the Visayas. Magnitude measures the energy released from the source of the quake, while intensity measures the strength of shaking produced by the tremor at a certain location.
