[Book] Introduction To Probability Solution Manual

The desired probability is $P(T > 1) = 1 - P(T < 1) = 1 - (1 - e^{-3}) = e^{-3} \approx 0.0498$. Let T = duration of time between no-hitters. We find $P(T > 2|T > 1)$, and by the memoryless property this is

Bookmark File PDF Solution Manual Introductory Probability Paul Meyer

simply $P(T > 1)$, which we found to be 0.0498 in part a. Let X = the number of no-hitters in a season. Assume that X is Poisson with mean $\lambda = 3$.

Ch. 5 Solutions - Introductory Statistics | OpenStax

The correct reasoning is to calculate the conditional probability $p = P(\text{two-headed coin was chosen} | \text{heads came up}) = \frac{P(\text{two-headed coin was chosen and heads came up})}{P(\text{heads came up})}$. We have $P(\text{two-headed coin was chosen and heads came up}) = \frac{1}{3}$, $P(\text{heads came up}) = \frac{1}{2}$, so by taking the ratio of the above two probabilities, we obtain $p = \frac{2}{3}$.
