Observe that, system (1) has two equations and two unknowns. A system is said to be in strictly triangular form if, in the equation, the coefficients of the first variables are all zero and the coefficient of is nonzero. In this case, system (1) is in strict triangular form because in the second equation the coefficients are 0,2, respectively.

A linear algebra over a field F is a vector space over F with multiplication of vectors defined so that for all u, v in V , $1 \cdot u = u$. Associative 2. Distributive 3. If there is an element e so that $e \cdot u = u$, then e is the identity element. is commutative if $u \cdot v = v \cdot u$. Polynomials made from vectors (with multiplication defined as above), linear
