symmetry here in the way the symmetries interact with each other. But this is completely different to the symmetries of the triangle. Let's see what happens if we do two symmetries with the triangle, one after the other. Let's do a rotation by a third of a turn anticlockwise, and reflect in the line through X.

Show that tangles labeled with $n = 0$ have the required symmetries. Show that if all tangles labeled with n have the required symmetries, then so do all tangles labeled with $n + 1$. Step 1: Labeling. One way to label all tangles with an integer n is simply to count the number of twists.
