Trading volume refers to the total number of financial instruments that were traded during a specific period of time. Trading volume is usually reported as the total number of shares that changed hands during the day, although the term can also be used when referring to bonds, derivative contracts, ETFs, and commodities.

What is Trading Volume? - My Trading Skills

In trading, the term volume represents the number of units that change hands for stocks or futures contracts over a specific time period. Traders rely on it as a key metric because it lets them know the liquidity level of an asset, and how easily they can get into or out of a position close to the current price, which can be a moving target. 1
