A variable, as we learned in pre-algebra, is a letter that represents unspecified numbers. One may use a variable in the same manner as all other numerals: To evaluate an algebraic expression you have to substitute each variable with a number and perform the operations included.

Variables and Equations | Pre-Algebra | Solving One- and ...

From the first equation, we express y using x . In the second equation, we write $x - 3$ instead of y . And there we get a linear equation with one variable x . $3x = 12$. $x = 12/3$. $x = 4$.

Now that we found x , we can use it to find y . So, the solution of this system is $(x,y) = (4,1)$
 $y = x - 3$. $y = 4 - 3$. $y = 1$. Let's solve one more system using a different method:
